

Sustainability reporting, built on one connected data foundation

Sustainability reporting is becoming more complex. Organizations may need to prepare for CSRD, ISSB, UK SRS, CDP, SB 253, investor questionnaires, and internal reporting, using data from different teams, sites, systems, and suppliers.

Trusted by

With Sweep, you can:

Collect data from everywhere:

Bring together inputs from systems, files, APIs, integrations, surveys, teams, sites, and suppliers.

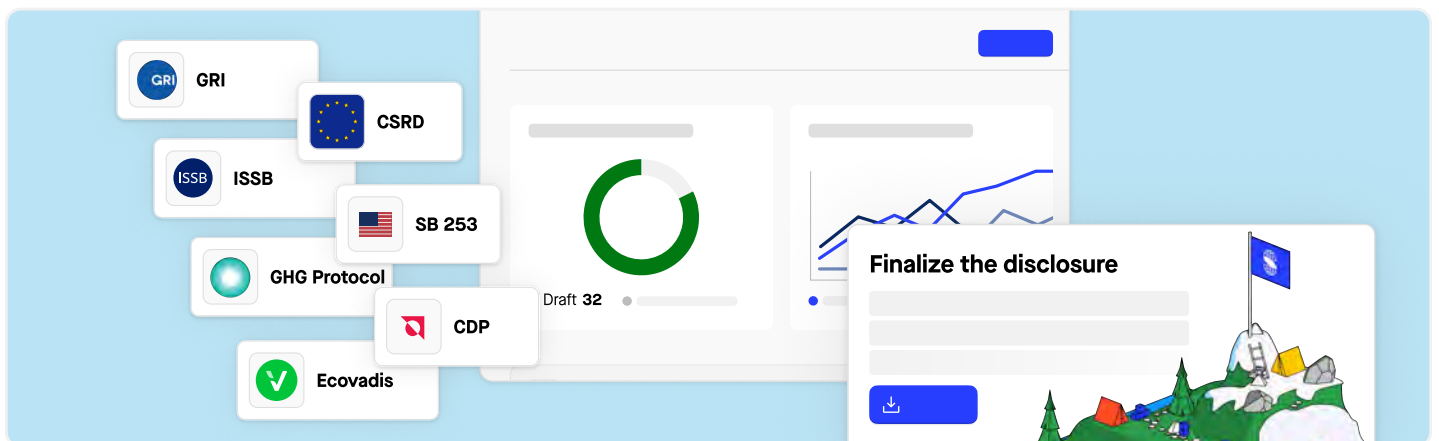

Map once, report everywhere:

Reuse one connected dataset across CSRD, ISSB, UK SRS, CDP, SB 253, investor reports, and other disclosures.

Build disclosures you can defend:

Keep sources, calculations, comments, reviews, approvals, and supporting documents connected.

SWEEP

One data foundation, every requirement

How Sweep works

From raw data to reporting-ready disclosures across every framework

Sweep connects the data, workflows, and controls needed to manage sustainability reporting at scale.

1

Connect and collect

Bring together data from systems, files, surveys, APIs, teams, and suppliers across emissions, energy, workforce, governance, risks, targets, and more.

2

Transform and validate

Clean, structure, and standardize data. Route requests and approvals, resolve gaps and inconsistencies, add supporting evidence, and maintain a clear history of changes.

3

Map across frameworks

Use validated data with pre-configured modules for CSRD and ESRS, ISSB, UK SRS, CDP, SB 253, and other disclosure frameworks.

4

Prepare disclosures collaboratively

Compile reviewed indicators, work collaboratively across teams, and use AI to help draft disclosures. Prepare outputs for internal review, assurance, investor engagement, regulatory submission, and external reporting, including CSRD machine-readable exports.

Hey, how can I help?

Meet Sweepy

Sweepy is Sweep's built-in AI assistant for sustainability data and reporting. It helps map inputs to indicators, validate information, identify gaps, and support disclosure drafting.

Your team reviews and approves every suggestion, with the underlying data and audit trail visible.

SWEEP

Connect data. Map frameworks. Review together. Report with confidence.

Every major framework covered

In practice, most large businesses need to report to multiple frameworks simultaneously and the requirements overlap in complex ways.

We support all major sustainability reporting frameworks:

“Working on our CSRD report underlined for us how relevant Sweep’s platform is: how much time and energy it will save us, and really make us more efficient.”

Marine Jacquier, Director of Sustainable Development

voltaia

“As a team of one in a large company with over 30 US sites and its own fleet, I not only implemented sustainability reporting successfully, but learned so much in the process. You can really grow with Sweep.”

Carlye Lucey, Aerospace & Defense Compliance Manager

COMPOSITES ONE

SWEEP

Reliable, straightforward reporting, ready for audit

Sweep turns sustainability reporting from a recurring scramble into a structured, repeatable process.

Spend less time chasing information:

Assign requests, track progress, and see what needs attention.

Improve consistency:

Reuse approved data across regulatory, voluntary, investor, and internal reports.

Strengthen collaboration:

Keep roles, comments, reviews, approvals, and ownership visible.

Prepare for assurance:

Connect evidence, sources, methodologies, changes, and approvals to each disclosure.

Adapt as requirements evolve:

Extend the same data foundation to new standards, jurisdictions, and stakeholder needs.

Ready to make sustainability reporting smoother?
